v.	)	**CIVIL ACTION NO. 2:06-CV-748-MEF**
	)	**(WO)**
SOUTHERN HEALTH SERVICES, *et al.*,	)	
	)	
Defendants.	)	

AFFIDAVIT OF KENNETH NICHOLS, M.D.

Before me, the undersigned notary public, in and for said County and State, personally appeared **Kenneth Nichols, M.D.**, who, after first being duly sworn by me, deposes and states as follows:

1. My name is Kenneth Nichols, M.D. I am over the age of 19 years and have personal knowledge of the facts contained herein.

2. I obtained my medical degree from UAB in 1982. From 1982 to 1985, I performed an internal medicine internship and residency at Baptist Memorial Hospital in Memphis, Tennessee. From July 1985 to the present, I have been in private practice in internal medicine in Prattville, Alabama. I am licensed by the State of Alabama as a medical doctor and have been so since 1985. Since 1997, I have been the medical director of the Autauga County Jail. Since November 2005, I have been employed by Southern Health Partners, Inc. ("SHP") to be the medical director of the Autauga County Jail.

3. SHP provides medical care to inmates in various jail facilities, including the Autauga County Jail. From November 2005 to the present, health care services have been provided to

inmates by SHP pursuant to a contract between SHP and the Autauga County Commission. Health care in the jail is provided under the direction of a medical team administrator ("MTA") as well as a medical director. During the period complained of by the plaintiff in this action, I was the medical director of the jail, and Jennifer Cook, Donna Cooey, Gail Colburn and Tina Ellis have served as the MTA.

4. When an inmate in the jail requires routine medical care, he or she obtains an inmate sick call slip from the corrections officer on duty in the housing unit and that form is provided to the medical staff for action. Routine sick calls are conducted by the medical staff inside the housing unit.

5. As I understand the plaintiff's complaint, the plaintiff alleges that I and SHP's medical nursing staff were deliberately indifferent to the plaintiff by failing to provide him adequate medication for his heart problems, back pain and anxiety/bipolar disorder, which he claims caused him to suffer a heart attack in late April 2005 and to be rushed to Baptist Medical Center Emergency Room in May 2005.

6. I have reviewed SHP's entire medical chart on the plaintiff. I have also reviewed the plaintiff's January and February 2004 medical records from Baptist Medical Center East in Montgomery, Alabama, attached as Exhibit A, his April 27, 2005 discharge summary from Shelby Baptist Hospital in Alabaster, Alabama, attached as Exhibit B, and records related to the plaintiff's May 30, 2006 emergency room admission, attached at Exhibit C

7. The plaintiff was booked into the Autauga County Jail on September 13, 2005. On September 15, 2005, I saw the plaintiff. In this initial presentation, the plaintiff said he was taking Plavix for his heart, Zocor for high cholesterol and Xanax for anxiety. Plaintiff gave a medical history of two stents and a prior heart attack in January 2004. He also mentioned problems with

anxiety and his back and said that he had undergone surgery for a ruptured spleen in November 2004. I assessed him as having arteriosclerotic cardiovascular disease (ASCVD) and prescribed Plavix 75 mg. daily for his heart, Mevacor for cholesterol, Paxil and Atarax for anxiety and Vasotec for high blood pressure.

8. Upon review of the plaintiff's January and February 2004 records from Baptist Medical Center East (Ex. A), the plaintiff did not suffer a heart attack in January 2004. On January 27, 2004, he was admitted to Baptist Medical Center East with complaints of chest pain, and he was seen by Dr. Finklea, who ruled out heart attack. Based on the history taken by Dr. Finklea, the plaintiff had a stenting of his left arterior descending ("LAD") artery in July 2002. He underwent repeat catheterization in January 2003 for recurrent chest discomfort and the stent was found to be open. On January 29, 2004, the plaintiff underwent catheterization performed by Dr. Finklea, who found the plaintiff's LAD stent to be patent and placed another stent in the circumflex artery. In his discharge instructions, Dr. Finklea prescribed Plavix 75 mg daily for three months, which would have expired at the end of April 2004.

9. On September 29, 2005, I saw the plaintiff in follow-up to his September 15th appointment, and he complained that he did not get his heart medications the prior week. My assessment remained ASCVD and I changed his prescription to include Elavil at night to help him sleep.

10. On October 6, 2005, I saw the plaintiff for complaints of not sleeping. I prescribed Elavil 100 mg. at the hour of sleep.

11. On November 8, 2005, I discontinued the plaintiff's Paxil prescription and started him on Fluoxitine (brand name Prozac) 20 mg. for depression and anxiety.

12. On November 9, 2005, I discontinued the plaintiff's prescription for Plavix and prescribed aspirin 325 mg. by mouth twice a day for his heart. Based upon my medical judgment, Plavix was no longer indicated, because it had been 22 months since the plaintiff's last cardiac event in January 2004. Also, Plavix, at that time, was not on SHP's formulary of approved drugs.

13. In November 2005, the plaintiff was administered the following medications:

- Aspirin for his heart.
- Lovastatin (brand name Mevacor) for cholesterol.
- Atarax for anxiety
- Vasotec for high blood pressure.
- Amitriptyline (brand name Elavil) to help him sleep.
- Paxil for depression and anxiety up through November 29, 2005.
- Fluoxitine (brand name Prozac) on November 30, 2005 for depression/anxiety.

14. In December 2005, the plaintiff was administered the following medications:

- Aspirin for his heart.
- Lovastatin for cholesterol.
- Vasotec for high blood pressure.
- Amitriptyline HCL (brand name Elavil) to help him sleep.
- Fluoxitine (brand name Prozac) for anxiety and depression.
- Hydroxyzine PAM (brand name Vistaril) for anxiety.

15. On December 10, 2005, the plaintiff completed an inmate sick call slip, complaining that Dr. Finklea told him that he needed to take Plavix everyday for life. The plaintiff was seen by Gail Colburn, RN– the MTA during this time period-- on December 16, 2005, and Nurse Colburn educated the plaintiff on the medications he was taking and advised the plaintiff that he could take

Plavix if it was brought from home. As stated before, at this juncture, it was my opinion that Plavix was not indicated, although it would not hurt the plaintiff if he were to take it.

16. On January 3, 2006, Angela Henley, LPN, performed a history and physical on the plaintiff. During his history and physical, the plaintiff identified prior heart problems and stated that he had been treated for anxiety and bipolar disorder.

17. From January 1, 2006 through February 6, 2006, the plaintiff was administered the following medications:

- Aspirin for his heart.
- Lovastatin for cholesterol.
- Enalapril Maleate (brand name Vasotec) for high blood pressure.
- Amitriptyline HCL (brand name Elavil) to help him sleep.
- Fluoxitine (brand name Prozac) for anxiety and depression.
- Hydroxyzine PAM (brand name Vistaril) for anxiety.

18. On February 6, 2006, the plaintiff was discharged from the Autauga County Jail.

19. The plaintiff was again booked into the Autauga County Jail on April 30, 2006. In his complaint, the plaintiff claims that he had a heart attack on April 22, 2006, and was discharged from the hospital on April 27, 2006. Attached as Exhibit A is the discharge summary from Shelby Baptist Medical Center dated April 27, 2006. As set out in the discharge summary, the plaintiff was admitted to the hospital with complaints of chest pain, but he was not diagnosed with a heart attack. Instead, the cardiologist recommended that he undergo a cardiac catheterization, which showed no change from his previous catheterization. There was no determination that the plaintiff suffered any injury or harm from not taking Plavix or any other medication.

20. On May 1, 2006, Nurse Colburn performed a medical screening of the plaintiff, wherein she noted that the plaintiff had bruising on his bilateral groin area from heart catheterization. On May 5, 2006, I entered an order prescribing Tylenol for the plaintiff's complaints of pain related to said bruising.

21. The plaintiff returned to the jail with prescriptions for Plavix, monopril and Zocor. On May 2, 2006, I entered an order continuing the plaintiff on all of the same medications he was on at the time he left the jail in February, substituting lovastatin for Zocor, aspirin for Plavix and Vasotec for monopril. Again, based on the plaintiff's history, it was my medical judgment that the plaintiff did not need Plavix for his heart and could be adequately treated with aspirin.

22. On May 3, 2006, the plaintiff was brought to the medical staff complaining of chest pain. He was seen by Angela Henley, LPN, who noted that the plaintiff attributed his chest pain to soreness related to him trying to catch himself from falling. Nurse Henley took the plaintiff's vital signs and monitored him for a couple of hours without further complaint.

23. On May 10, 2006, the plaintiff completed an inmate sick call slip, complaining of an abscess tooth on his right bottom jaw. On May 12, 2006, the plaintiff was seen by Marlo Oaks, RN. Pursuant to my protocol for such complaints, the plaintiff was ordered Keflex and Percogesic and was added to the dental list. On May 24, 2006, the plaintiff was seen by Dr. Roberson, an Autauga County dentist. Dr. Roberson found that the plaintiff had two infected teeth, and he extracted same.

24. On May 11, 2006, I saw the plaintiff, and he complained of pain in the left groin and testicles related to the placement of his heart catheter. I continued the plaintiff on the same medications, which included Tylenol for pain.

25. On May 17, 2006, the plaintiff completed an inmate sick call slip, where he again complained that he was hurting in his groin area where the surgeons had placed his heart catheter.

On May 19, 2006, the plaintiff was seen by Marlo Oaks, RN in response to this sick call slip, and Nurse Oaks noted that the plaintiff was not in acute distress and added the plaintiff to the list of patients for me to see.

26. On May 25, 2006, I saw the plaintiff for his complaints of soreness in his left groin area. I noted that the plaintiff had a tender epigastrium. My assessment was ASCAD and gastritis, and I prescribed Zantac for the gastritis. I also ordered Tylenol to treat the plaintiff's complaints of pain.

27. In May 2006, the plaintiff was administered the following medication:

- Aspirin for his heart.
- Lovastatin (brand name Mevacor) for cholesterol
- Vasotec for high blood pressure.
- Amitriptyline (brand name Elavil) to help him sleep.
- Fluoxitine (brand name Prozac) for anxiety and depression.
- Hydroxyzine PAM (brand name Vistaril) for anxiety.
- Tylenol for pain.
- Keflex for dental complaints.
- Percogesic for dental complaints.
- Zantac for gastritis.

28. On May 30, 2006, the plaintiff complained to the medical staff of chest pain, and I gave a telephone order to send the plaintiff to the emergency room for evaluation. The plaintiff was sent to Baptist Medical Center in Prattville and was seen by Dr. Joel Sullivan, who noted a normal EKG. The plaintiff's records from this ER visit are attached as Exhibit B. Tina Ellis, LPN, documents this emergency room visit on June 3, 2006, but it actually occurred on May 30, 2006.

Based upon the emergency room records, there was no determination that the plaintiff suffered any injury or harm from not taking Plavix or any other medication. Dr. Sullivan's discharge instructions included a prescription for Plavix, but I substituted aspirin for Plavix based on my medical judgment that the plaintiff was responding well to aspirin and did not need Plavix.

29. On June 28, 2006, the plaintiff completed an inmate sick call slip complaining of severe pain in his back, neck and hip from injuries received from a fall down the stairs.

30. On June 29, 2006, I saw the plaintiff in response to these complaints. I assessed the plaintiff with back pain and prescribed a Medrol dose pack, Motrin and Robaxin to treat these complaints of pain.

31. In June 2006, the plaintiff was administered the following medications:

- Aspirin for his heart.
- Lovastatin for cholesterol.
- Enalapril Maleate (brand nameVasotec) for high blood pressure.
- Amitriptyline (brand name Elavil) to help him sleep.
- Fluoxitine (Prozac) for anxiety and depression.
- Hydroxyzine PAM (brand name Vistaril) for anxiety
- Zantac for gastritis.
- Medrol dose pack for back pain.
- Ibuprofen (Motrin) for back pain.
- Robaxin for back pain.

32. On July 4, 2006, the plaintiff completed an inmate sick call slip, wherein he complained that his left ankle was swollen rising out of his fall down the stairs and requested an x-ray.

33. On July 5, 2006, I ordered that the plaintiff receive an x-ray on his left ankle, which was performed by Dr. Randall Finley. Dr. Finley noted that the plaintiff had no fracture, dislocation or any abnormality with his ankle.

34. In July 2006, the plaintiff was administered the following medications:

- Lovastatin for cholesterol.
- Aspirin for his heart
- Enalapril Maleate (brand name Vasotec) for high blood pressure.
- Amitriptyline (brand name Elavil) to help him sleep.
- Fluoxitine (brand name Prozac) for anxiety and depression.
- Hydroxyzine PAM (brand name Vistaril) for anxiety.
- Zantac for gastritis.
- Medrol dose pack for back pain (up through July 5, 2006).
- Ibuprofen (Motrin) for back pain (up through July 5, 2006).
- Robaxin for back pain (up through July 8, 2006).

35. In August 2006, the plaintiff was administered the following medications:

- Lovastatin for cholesterol.
- Aspirin for his heart.
- Enalapril Maleate (brand name Vasotec) for high blood pressure.
- Amitriptyline (brand name Elavil) to help him sleep.
- Fluoxitine (Prozac) for anxiety and depression.
- Hydroxyzine PAM (brand name Vistaril) for anxiety.
- Zantac for gastritis.

36. On August 29, 2006, the plaintiff completed an inmate sick call slip, wherein he requested that the medical staff drop all of his medications except aspirin, Elavil and Vistaril.

37. On September 2, 2006, the plaintiff completed a refusal of treatment and release of responsibility form, wherein he again stated that he wanted all of his medications stopped except Vistaril, Elavil and aspirin.

38. Consistent with the plaintiff's desires, the plaintiff received aspirin, Vistaril and Elavil in September 2006. On September 21, 2006, I saw the plaintiff for complaints of lower back pain. I noted that he was refusing his medication. I ordered that the plaintiff take ibuprofen and Flexaril, a muscle relaxer, for his back pain and also ordered that the plaintiff resume taking Lovastatin for cholesterol and Vasotec for high blood pressure. Consistent with my orders, the plaintiff resumed taking these medications.

39. On October 9, 2006, the plaintiff completed an inmate sick call slip, wherein he complained of experiencing pain in his left abdomen near his rib cage where he had his spleen removed. He also complained of back pain. On October 10, 2006, the plaintiff was seen by Tina Ellis, LPN, who referenced my prior orders for medication.

40. On October 31, 2006, the plaintiff completed an inmate sick call slip, wherein he complained of pain in his abdomen and requested to see me.

41. On November 3, 2006, I saw the plaintiff for these complaints and assessed him with esophageal reflux. I prescribed Reglan to assist him with this problem.

42. In October 2006, the plaintiff was administered the following medications:

- Lovastatin for cholesterol.
- Aspirin for his heart
- Enalapril Maleate (brand name Vasotec) for high blood pressure.

- Amitriptyline (brand name Elavil) to help him sleep.
- Fluoxitine (brand name Prozac) for anxiety and depression.
- Hydroxyzine PAM (brand name Vistaril) for anxiety.
- Zantac for gastritis.
- Mylanta for acid indigestion

43. Based upon my review of the plaintiff's records, my treatment of the plaintiff and my education, training and experience, it is my medical opinion that the plaintiff received appropriate medications for his heart problems and anxiety. Indeed, the plaintiff regularly was administered aspirin for his heart, Lovastatin for cholesterol and Vasotec for high blood pressure. Moreover, he was regularly administered Vistaril and Prozac to combat his anxiety. When the plaintiff complained of back pain–which was not often--he was administered medication to alleviate same. While incarcerated at the Autauga County jail, the plaintiff has not identified nor has he ever informed me or the medical staff that he was taking Percocet for back pain. The plaintiff was not denied any medication, including Plavix, on the basis of cost or expense. On the contrary, my orders prescribing and discontinuing medication to the plaintiff were based solely on my medical judgment of the plaintiff's condition.

44. All necessary care provided to the plaintiff by me and the SHP medical staff was appropriate, timely and within the standard of care.

45. On no occasion was the plaintiff ever at risk of serious harm, nor was I or the medical staff ever indifferent to any complaint that the plaintiff made.

Kenneth Nichols, M.D.

STATE OF ALABAMA)
)
COUNTY OF Autauga)

I, the undersigned Notary Public in and for said county in said state, hereby certify that Kenneth Nichols, M.D. whose name is signed to the foregoing and who is known to me, acknowledged before me that, being fully informed of the contents of said instrument, he executed the same voluntarily on the day the same bears date.

GIVEN UNDER MY HAND and official seal on this the 27 day of November, 2006.

PATIENT VERIFICATION DATA:
HUFFMAN, JAMES H- 0402700752

Transferred to Baptist South care of Dr. Finklea for cardiac catheterization.

CONSULTANTS: Dr. Finklea, Montgomery Cardiovascular Associates.

HOSPITAL COURSE: The patient was admitted with chest pain. He had known cardiac disease with stent placement in the past. He was ruled out for MI. Dr. Finklea was consulted and felt that his chest pain was very suspicious for unstable angina. The patient and Dr. Finklea discussed further care and it was felt that the best course of action was a left heart catheterization. He remained stable during his hospital stay at Baptist East. On 1/29/04 he was transferred to Baptist South under the care of Montgomery Cardiovascular Associates for cardiac catheterization.

HP4

PATIENT VERIFICATION DATA:
HUFFMAN, JAMES G- 0402700752

CHIEF COMPLAINT: Chest pain.

HISTORY OF PRESENT ILLNESS: The patient is a 50 year old gentleman with CAD, status post stent placement by Dr. Escobar who presented to the Emergency Room with complaints of chest pain. His chest pain started at approximately 4:15, this became very severe and radiated up into his neck and left arm. It felt like an elephant sitting on his chest. He used Nitroglycerin spray and it improved only a little. He was then on his way home in order to rest but his pain became much worse. He became nauseated, vomited, had sweats and shortness of breath. He then presented to the Emergency Room. He was given Nitroglycerin in the Emergency Room and his pain abated.

The patient notes that over the past three weeks he has had great increase in his stress due to loss of his father. He has been having to use his Nitroglycerin 1-2 times per week due to chest pain.

PAST MEDICAL HISTORY: CAD, status post angioplasty and LAD stent placement 100% RCA occlusion with collateral. Repeat cath in 1/03 showed the stent to be open. Hyperlipidemia, peptic ulcer disease, sinus congestion and cough. Anxiety attacks, chronic back pain secondary to herniated disc, peripheral vascular disease.

PAST SURGICAL HISTORY: Back surgery.

MEDICATIONS:
Plavix 75 mg q day
Lipitor 20 mg q day.
Nitrospray prn.
Nexium 40 mg q day
Percocet 10/650 b.i.d.
Xanax 2 mg b.i.d.
Multi-Vitamin
Aspirin 81 mg per day

ALLERGIES: TETRACYCLINE, CODEINE.

FAMILY HISTORY: Unknown, the patient is adopted.

SOCIAL HISTORY: Started smoking again 6 months ago. Tobacco for last 30 years, denies alcohol use.

REVIEW OF SYSTEMS:
GENERAL: The patient has been very stressed over the past several months due to

prolonged illness of his father and then his death.

HEENT: Unremarkable.
LUNGS: Unremarkable.
CARDIOVASCULAR: See HPI.
GI: Has history of peptic ulcer, no current problems.
GU: Admits to problems with intermittent impotence.
EXTREMITIES: Complains of pain in his calves with walking, this stops when he rests. He has had peripheral vascular disease evaluation in the past with Dr. Richardson.

PHYSICAL EXAMINATION:
Thin anxious white male in no distress.

VITAL SIGNS: Temperature 97.6, pulse 52, respirations 20, Blood pressure 110/68.
HEENT: PERRLA, EOMI, Tympanic membranes are clear bilaterally. Mouth clear, throat clear.
NECK: Supple.
LUNGS: Clear to auscultation.
CARDIOVASCULAR: PMI within normal limits, S1-S2 normal. No MRG. Carotids 2+ and equal, no bruit.
ABDOMEN: Soft, non-tender, no hepatosplenomegaly, no mass, no bruit.
EXTREMITIES: No edema, pulses are diminished at + bilaterally.
NEUROLOGIC: Nonfocal.

LABS: Significant for mild anemia with H&H 12.4, 36.3, with normal indices. Chemistries normal except for a CO2 of 33, and total protein mildly low at 6.3. CK 51 and 35 with negative Troponin. EKG normal sinus rhythm, no acute changes. Chest x-ray is negative.

IMPRESSION:
1. Chest pain, probably cardiac in origin. The patient is admitted to rule out MI and he is placed on this protocol. He will receive Nitroglycerin, aspirin, oxygen, and a cardiac consult will be done.
2. Peripheral vascular disease, we discussed the cessation of tobacco and the use of walking. He will be discussing this with his new Primary Care Physician, Dr. Fuentes with who he has an appointment next week.
3. Tobacco use, encouraged to discontinue.
4. Hyperlipidemia on treatment.
5. Chronic back pain, on treatment, he does desire pain management to be in his regimen.

I am sure Dr. Fuentes will be referring him for such.

PATIENT VERIFICATION DATA:
HUFFMAN, JAMES G- 0402700752

DATE OF CONSULTATION: 1/28/04

We appreciate the opportunity of seeing Mr. Huffman in consultation for chest pains. He has been seen by Montgomery Cardiovascular Associates in the past with a history of coronary artery disease, and stenting of his LAD in July of 2002, at that time there was a total occlusion of his right coronary with adequate collateral circulation, left ventricular performance was good and there was no high grade stenosis of the circumflex system. He then underwent repeat catheterization in January 2003 for recurrent chest discomfort and according to his report, the stent was open. Since then he has had chest tightness off and on particularly when he was >>_____<<, he would go long spells without discomfort. He has rather recently lost his father and has been in both financial difficulties as well as having difficulty straightening out his father's affairs. He was under considerable stress yesterday and in fact mad at the time and developed chest tightness, discomfort and some pain. Took Nitroglycerine, it got better. Got in the car and was going home and became diaphoretic, nauseated and came on to the emergency room. Here he has had tightness a good bit of the time, very mild much of the time, but it did seem to increase some when he got up and walked down the hall today. He has actually been outside once to smoke. His cardiac enzymes have been negative and his EKG has been normal. There is a minimal anemia. Mild sinus bradycardia.

He denies orthopnea or paroxysmal nocturnal dyspnea. Denies symptoms of dysrhythmia, currently. Back in January he did have syncope after getting up quickly. His exercise capacity has been reasonably good at about a little over .25 mile and stopped by claudication of his right leg. He has had vascular problems there in the past and nothing done. He denies orthopnea and paroxysmal nocturnal dyspnea. He does have known COPD, bronchitis and tobacco abuse. He stopped smoking with Zyban and nicotine patches and hopes to try again.

PAST SURGICAL HISTORY
1. Lumbar laminectomy
2. Previous stenting of LAD and recath.

PAST MEDICAL HISTORY:
1. Hyperlipidemia
2. Peptic ulcer disease.
3. Lumbar disc disease
4. Peripheral vascular disease
5. History of asthma, bronchitis and perhaps COPD.
6. Chronic anxiety

DRUG ALLERGIES: **CODEINE, TETRACYCLINE**

FAMILY HISTORY: Unknown (adopted).

SOCIAL HISTORY: Smoker, unmarried, does have a girlfriend. No alcohol consumption. No routine exercise.

REPORT OF CONSULTATION

PRINTED BY: b17606 DATE 10/5/2006

PATIENT: HUFFMAN, JAMES G **PATIENT #: 000092370** 0402900232

REVIEW OF SYSTEMS
HEENT: NO sinus difficulties, hear, visual difficulties.
CARDIOVASCULAR/RESPIRATORY: See present illness. No pneumonia.
GI: NO hematemesis or melena. No significant diarrhea or constipation. Does have dyspepsia for which he takes Prevacid 40 and has had some reflux problems.
GU: No dysuria, pyuria, hematuria, stones.
ENDOCRINE: No diabetes mellitus, or thyroid difficulties.

PHYSICAL EXAMINATION: His blood pressure _____.
NECK: His carotids have rapid upstroke without bruits. Central venous pressure is normal.
LUNGS: Clear. No significant murmur, rub or gallop. PMI is normal .
ABDOMEN: Normal, without organomegaly , tenderness, masses, abnormal pulsations, bruit. Femoral pulses are 2+.
EXTREMITIES: Popliteals 2+. 1+ foot pulses. No ankle edema.

EKG is normal. Chest x-ray I will review. EKG normal, mild sinus bradycardia.

PROBLEMS:
1. Coronary artery disease
   1.1. Status post stenting of LAD in January 2003 with known chronically occluded right coronary with good collateral, good left ventricle., stenting in July 2002.
   1.2. Recath January 2003 with patent stent.
   1.3. Recurrent chest discomfort, very worrisome for coronary artery disease.
2. Hyperlipidemia.
3. Continued tobacco abuse.
4. History of asthma and possible COPD.
5. History of dyspepsia and reflux.
6. Syncope in 12/03
7. History of lumbar laminectomy
8. Peripheral vascular disease with claudication right leg.

ASSESSMENT
1. Current symptoms worrisome for unstable angina.

PLAN:
Cardiac catheterization, possible angioplasty. Discussed risks, procedure and rationale with him. He agrees and desires to proceed. He will be transferred over to Baptist Medical Center South.

HUFFMAN, JAMES H
B0402900232
B000319167

NAME OF PROCEDURE: 1. LEFT HEART CATHETERIZATION
2. LEFT VENTRICULOGRAPHY
3. RIGHT AND LEFT CORONARY ARTERIOGRAPHY
4. PTCA AND STENT TO CIRCUMFLEX CORONARY ARTERY

PREOPERATIVE DIAGNOSIS: UNSTABLE ANGINA

POSTOPERATIVE DIAGNOSIS: SUCCESSFUL PTCA AND STENT

I. PROCEDURE: This patient was brought to the Cardiac Catheterization Laboratory, prepped and draped in the usual fashion. 1% Lidocaine was infiltrated into the right groin area. Then, using the Seldinger technique, a 6 French sheath was placed in the right femoral artery and flushed with heparinized saline. A 5 French pigtail catheter was inserted over a guide wire, flushed in the descending aorta, and used to measure pressures in the aorta and left ventricle. This was then used to perform left ventriculography in the biplane projections. This catheter was removed over a guide wire and replaced with Judkins left and right 4 catheters, which were used to perform selective angiography in multiple levels of obliquity. A new 90% stenosis in the large first obtuse marginal branch was noted with no significant restenosis in the stented LAD and continued total occlusion of the right with good collateralization. Plans were made for PTCA of the circumflex coronary artery. A 6 French left 4 catheter was inserted over a guide wire and placed in the ostium of the left coronary artery. A 0.014 Choice wire was manipulated down the circumflex coronary artery and out the obtuse marginal branch, and a 3.5 x 8 mm Cypher stent was positioned and deployed at 13 atmospheres, yielding a final luminal diameter of 3.62 mm. The angiographic result looked excellent. After taking post PTCA views, the procedure was terminated. The sheath was sutured in place. Other apparatus was removed.

Prior to the beginning of the procedure, the patient was given weight-adjusted Heparin, and an ACT measured at greater than 200 seconds. Integrilin bolus was given and infusion begun.

II. HEMODYNAMIC DATA:
A. Aortic pressure: 120/75.
B. Left ventricular pressure: 120/8.

III. LEFT VENTRICULOGRAM: The left ventricle is normal in size with normal contractility in all segments. There is no mitral insufficiency and the aortic structures appeared normal.

IV. CORONARY ARTERIOGRAMS:
A. The left main coronary artery is normal and free of disease. It bifurcates into the LAD and circumflex coronary artery.
B. The left anterior descending coronary artery is large with mild irregularity in the proximal aspect with stenosis up to around 25%. The first diagonal branch is size B to A-B and has mild proximal disease. It is clean distally.

(CONTINUED)

C. The left circumflex coronary artery is large but not dominant. The remaining portion of the circumflex coronary artery is normal. The first obtuse marginal branch is size A. There is a discreet 90% stenosis in its mid portion and is clean distally. The continuation of the circumflex has minimal disease.
D. The right coronary artery is totally occluded after a long area of severe disease in the mid portion. The distal vessel is well collateralized by the left system

V. POST PTCA AND STENT: Residual stenosis in the circumflex coronary artery is 0%. There is no dissection. There is TIMI grade III flow distally.

CONCLUSIONS:
1. NORMAL LEFT VENTRICULAR SIZE AND WALL MOTION.
2. THREE VESSEL CORONARY ARTERY DISEASE AS DESCRIBED ABOVE, INCLUDING NEW LESION IN THE CIRCUMFLEX.
3. NO RESTENOSIS OF LEFT ANTERIOR DESCENDING CORONARY ARTERY.
4. SUCCESSFUL PTCA AND STENT OF CIRCUMFLEX CORONARY ARTERY.

HUFFMAN, JAMES H
B0405000003
B000319167

PROBLEM LIST:
1. CHEST PAIN - NEGATIVE CARDIAC ENZYMES AND EKG - DURING POLICE ARREST
2. CORONARY ARTERY DISEASE, STATUS POST PTCA AND STENT OF LAD IN 2002, PTCA AND STENT OF CIRCUMFLEX CORONARY ARTERY IN 1/4 BY DR. FLEMMING, CHRONIC TOTAL OCCLUSION OF RCA WITH NORMAL LEFT VENTRICULAR FUNCTION.
3. DYSLIPIDEMIA.
4. SMOKER, CHRONIC OBSTRUCTIVE PULMONARY DISEASE.
5. PERIPHERAL VASCULAR DISEASE.
6. NONCOMPLIANCE WITH MEDICAL MANAGEMENT.

HISTORY: This is a 50 year old white male who, last night at approximately 8 p.m., while being arrested by the police due to what he states was an attempt to pay for his food at the deli shop with a check, was apparently arrested and, after that, developed some sternal chest discomfort with radiation to the left arm, and brought to the Emergency Room for further treatment. Negative cardiac enzymes and echocardiogram on admission to the Emergency Room, and pain relieved by Nitroglycerin. Presently pain-free.

PAST MEDICAL HISTORY:
1. Coronary artery disease, status post remote PTCA and stent of LAD and PTCA and stent of circumflex coronary artery in 1/2004 with chronic totally occluded RCA and preserved left ventricular function.
2. Dyslipidemia.
3. Peptic ulcer disease.
4. Lumbar disk disease.
5. Peripheral vascular disease.
6. Chronic obstructive pulmonary disease - asthma.
7. History of chronic anxiety.

PAST SURGICAL HISTORY: Laminectomy, PTCA and stenting.

ALLERGIES: CODEINE, TETRACYCLINE.

FAMILY HISTORY: Unknown.

SOCIAL HISTORY: Smoking, denies alcohol abuse, denies illicit drug abuse, although did not answer that frankly.

REVIEW OF SYSTEMS: Negative, otherwise.

PHYSICAL EXAMINATION: Blood pressure 105/57, heart rate 53 per minute, respiratory rate 18, temperature 97, saturation 100.

HEAD: Normocephalic, atraumatic.

NECK: No JVD or bruit.

CHEST: Clear to auscultation.

(CONTINUED)

HEART: Regular rate and rhythm, S1, S2 without murmurs, rubs, gallops.

ABDOMEN: Benign.

EXTREMITIES: No clubbing, cyanosis, edema. Symmetrically +2 palpable pulses.

EKG: Sinus bradycardia; otherwise, negative.

CARDIAC ENZYMES: Troponin less than 0.04.

LABORATORY DATA: Pending.

PLAN: Admission to the floor, resume home medications as well as low molecular weight heparin, cardiac enzymes and cardiac catheterization by Dr. Flemming during the daytime. Will obtain drug screen, since the patient had slurred speech and was reluctant in answering if has been exposed to any illicit drugs. He consented for drug screen.

DISCHARGE SUMMARY

NAME:	HUFFMAN, JAMES	**MR #:**	224062
DOB:	10/29/1953	**ADMISSION#:**	57129694
AGE/SEX	52 /M	**PT CLASS:** R	**ROOM:** 244
		CLINIC CODE:	2E
ADMITTED:	**04/23/2006 02:27**	**DISCHARGED:**	04/27/2006
ATT MD:		**FAMILY MD:**	

DIAGNOSES ON DISCHARGE:
1. Peripheral vascular disease with claudication.
2. Noncardiac chest pain.
3. Ongoing tobacco abuse.

HISTORY OF PRESENT ILLNESS: Patient is a 52-year-old white male presents with complaint of chest pain. Gives a textbook description, "elephant sitting on chest," jaw pain, left arm pain with associated nausea, diaphoresis, dyspnea. Patient, however, does not remember exertional pain but reports stress related. Patient has been incarcerated for forgery, which he denies. History of a stent at Baptist Montgomery, he cannot remember if 2004 or 2005.

RISK FACTORS FOR HEART DISEASE: Positive tobacco abuse, positive family history, positive hypertension. Negative diabetes mellitus. Positive hyperlipidemia.

MEDS ON ADMISSION: Plavix, Zocor, Xanax, Percocet, and Monopril.

ALLERGIES: CODEINE.

REVIEW OF SYSTEMS: HEENT: No headache. CARDIOVASCULAR: See history of present illness. PULMONARY: No cough, dyspnea. GI: No nausea, vomiting, diarrhea, melena, hematochezia, hematemesis. GU: No dysuria, frequency, or urgency. NEUROLOGIC: No seizure or syncopal disorder. VASCULAR: Positive for claudication of the right leg.

PHYSICAL EXAMINATION:
GENERAL: Reveals a well-developed, well-nourished, white male in no acute distress. HEENT: Normocephalic/atraumatic. Eyes: Extraocular movements are intact. Pupils equal, round, and reactive to light. Mouth: Tongue protrudes in the midline. NECK: Supple without bruits, lymphadenopathy, or thyromegaly. HEART: Regular rate and rhythm without murmurs, gallops, or clicks. LUNGS: Clear without rales, rhonchi, or wheezes. ABDOMEN: Soft, nontender. Bowel sounds are positive. No hepatosplenomegaly. NEUROLOGIC: No focal motor or sensory deficits. EXTREMITIES: Decreased pulses on the right leg.

HOSPITAL COURSE: Patient was admitted. Cardiology was consulted. Records were obtained from

SHELBY BAPTIST MEDICAL CENTER
ALABASTER, ALABAMA

DISCHARGE SUMMARY

Montgomery. After review, cardiologist recommended repeat cath. Cath was performed. It showed no change from previous cath done at Montgomery. Recommended medical therapy only. Patient was discharged to home. Will follow up with cardiologist regarding his coronary artery disease.

☐ Call on next business day for follow-up appointment in _____days / weeks ☐ Next available

☐ Return to Emergency Dept in _____hours / days for recheck.
☑ If no improvement or your condition worsens, call your private physician or return to the Emergency Department for a recheck.
☑ Learning needs assessed ☐ Instructions Modified_____
☑ Education provided on new Medication Plavix

I understand that the treatment I have received was rendered on an emergency basis and is not meant to replace complete care from a primary care provider or clinic. Furthermore, I many have been released before all of my medical problems were apparent, diagnosed, and/or treated. If my condition worsens, I have been instructed to call my primary care provider or return to this facility or the nearest emergency center. I understand that I should NOT drive or perform hazardous tasks if my medication or treatment causes drowsiness. I have read and understand the above, received a copy of this form and applicable instruction sheets, and I will arrange for follow-up care. If diagnostic tests indicate a need for modification in therapy, you will be notified at the phone number you provided.

RADIOLOGY

Procedure Name:	Accession Number:	Procedure Date / Time:	Ordering Physician:
DX Chest Portable	DX-06-0061208	5/30/2006 08:06:00 PM	Sullivan, Joel C., MD

Reason For Exam:
chest pain

FINDINGS
HUFFMAN, JAMES G

PORTABLE CHEST:

Both lungs appear to be well expanded without an identifiable abnormality. Heart and cardiomediastinal structures are unremarkable. I do not identify an abnormality of the bony thorax. The pleural space and diaphragmatic shadows are unremarkable. Air spaces appear normal.

IMPRESSION:
1. NO ABNORMALITY IDENTIFIED.
